proc. Natl. Acad. Sci. U.S.A. 87:9975-9979(1990)
-!- FUNCTION: This enzyme converts phycone into lycopene via the intermediaries of phytofluene; zeta-carotene and neurosporene by the introduction of four double bonds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Bacteria; Proteobacteria; Gammaproteobacteria; Enterobacteriales;

J. Bacteriol. 177:6575-6584(1995)
J. PUNCTION: This enzyme converts phytoene into lycopene via the
intermediaries of phytofluene, zeta-carotene and neurosporene by
the introduction of four double bonds (By similarity).
J. COFACTOR: PAD (Probable).
J. PATHWAY: Carotenoid biosynthesis. Involved in astaxanthin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Carotenoid biosynthesis; Oxidoreductase; FAD; Flavoprotein; NAD.

"Carotenoid desaturasis from Rhodobacter capsulatus and Neurospora
domains homologous to flavoprotein disulfide oxidoreductases.";
J. Biol. Chem. 265:16020-16024 (1990).

-!-FUNCTION: This enzyme converts phytoene into zeta-carotene via intercediazy of phytofluene by the symmetrical introduction of double bonds at the C-11 and C-11' positions of phytoene.
                                                                                                                                                                                                                                                                                                                                                  461 AHDFFNVLAFRPRIXAQGMDNAYFVGASTHPGTGVPIVLAGAKITAEQILEE 512

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          70
                                                                                                                                                                                                                                              Schumann G., Nurnberger H., Sandmann G., Kruegel H.J.;
"Activation and analysis of cryptic crt genes for carotenoid
biosynthesis from Streptomyces griseus.";
Mol. Gen. Genet. 252.658-66(1996).
-!- FUNCTION: This enzyme converts phytoene into zeta-carotene via the intermediary of phytofluene by the symmetrical introduction of two double bonds at the C-11 and C-11' positions of phytoene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               GRLDARIGHFVSDERLRRVFSFQALYAGVPPARALAAYAVIAYMDTVAGVYFPRGGMHAL

Sequence analysis of the genome of the unicellular cyanobacterium
Synechocystis sp. strain PCC6803. II. Sequence determination of the
entire genome and assignment of potential protein-coding regions.";
DNA Res. 3:109-136(1996).
I- FUNCTION: This enzyme converts phytoene into zeta-carotene via the
intermediary of phytofluene by the symmetrical introduction of two
double bonds at the C-11 and C-11' positions of phytoene.
I- COPACTOR: NAD, NADP, or PAD (probable).
I- BRZYME REGULARION: Inhibited by the herbicide norflurazon in a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This SWISS-PROT entry is copyright.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       non-competitive way.
PATHWAY: Carotenoid biosynthesis.
SUBCELLULAR LOCATION: Membrane-associated (Probable).
SIMILARITY: Belongs to the phytoene dehydrogenase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  DB 1; Length 472;
